

## Vipro Squeegee grinder

The universal Vipro belt grinder, developed by Viprotech, is suited for sharpening both manual and machine squeegees. While grinding, the squeegee is pressed upon a rotating belt that is running over a flat surface. The squeegee position is fixed against a stop during grinding.

This squeegee grinder, equipped with a thermal secured 400 Volts motor, allows sharpening flat, rounded and pointed profiles.

Special rolls automatically keep the belt running in the middle of the grinder. Changing the belt is done quickly and easy.

The grinder can easily be mounted to the wall with only 4 screws. Special models or assemblings on request. No installation required.

The grinder is available with a usefull length of 125 or 160 cm. The belt width is 75 mm.  
Option: 230 Volts, 50 Hz, 1 phase+N+Pe
